GRABMASTER® COIL HANDLING EQUIPMENT

BULLETIN
NO. 204

COIL TONGS — PARALLEL ARM SERIES 72

DOWNS Coil Tongs are for handling any coiled material having an open core, such as steel or aluminum.

DOWNS Coil Tongs save valuable floor space in storage and handling areas. This tong requires only a narrow aisle for removal of the tong from the coil, thus enabling the coils to be stacked close together.

The tongs are balanced for rapid easy adjustment. Only a light pull on the hand chain is required to open or close the tong. When under load the tong exerts a positive closing force which provides a grabbing action on the coil.

The lifting pads are curved and all parts that may contact the load are smoothly finished to minimize chance of damage to the coiled material.

COIL HOOKS—COUNTERWEIGHTED SERIES 71

DOWNS Coil Hooks are for the lifting, transporting, and handling of steel and aluminum coiled material.

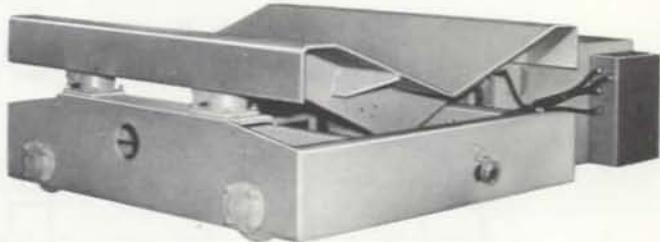

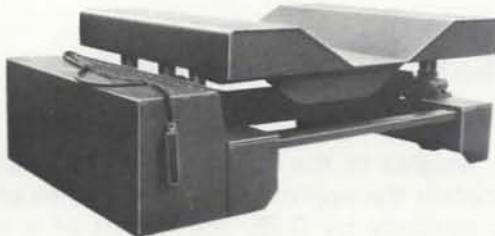

Hooks are counterweighted to balance and hang level at all times for easy insertion and removal from the coil.

Constructed of high strength steel, all corners and surfaces that will contact the coil are properly radiused, smoothed and curved to eliminate stress concentrations and prevent damage to the edges and inner surface wraps of the coil material.

	71-500-60	60	48	31	55	30	14 1/4	5 1/2	21 1/2	8	7 1/4	4311
	71-500-72	72	60	37	67	30	15 1/4	5 1/2	22 1/2	8	7 1/4	4924

*The minimum coil width as specified is the shortest width that may be handled without the lower arm of the hook protruding thru the coil. Narrower width coils may be handled if protrusion of the hook thru the coil is not a problem.

COIL CARS — ELEVATING SERIES 73 & 74

DOWNS Coil Cars are for moving and elevating steel and aluminum into position for placing on or removing from the mandrels of processing machines.

Travel and elevating motions are each operated by independent motors. Furnished complete with all controls, wiring and push-button station as standard equipment.

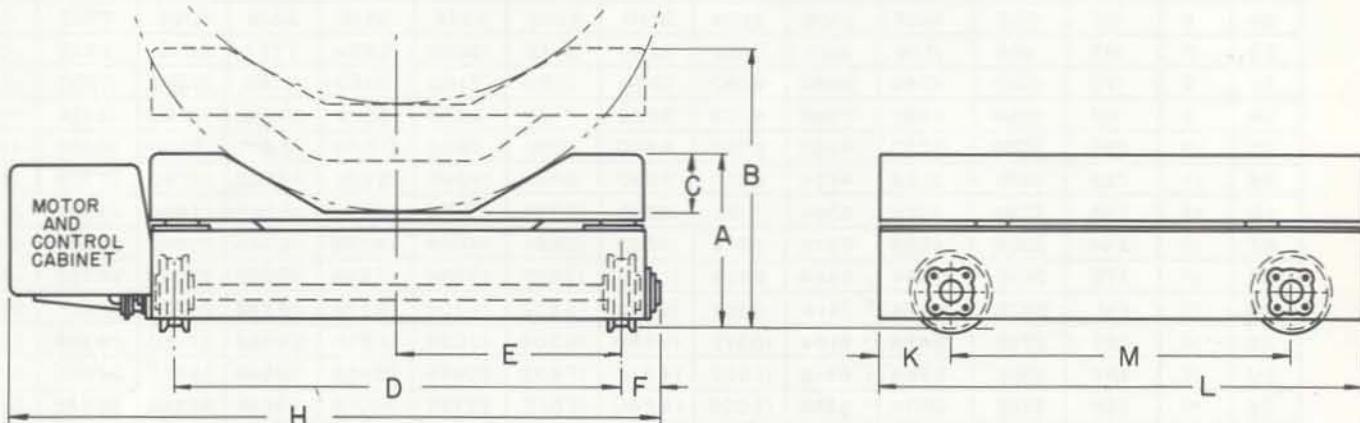

Closed end cars, Series 73, are for use where there are no obstructions on the floor beneath

the mandrel.

Open end cars, Series 74, have one end of the car frame open to pass over floor obstructions such as the base frame of the processing mandrel.

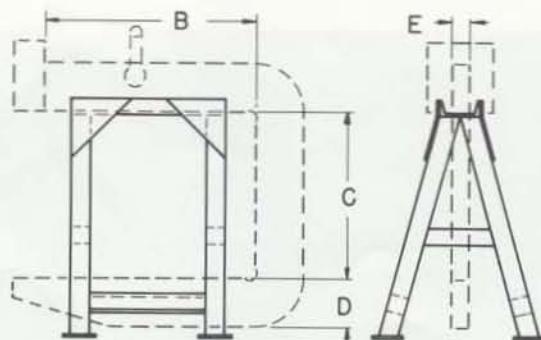

Wheels are roller bearing, double flange and will operate on rails up to 35 # A.S.C.E. with a 1-3/4" head width.

When making inquiries: give available electric current characteristics.

COIL HOOK STORAGE RACK

A time and space saving stand for storing coil hooks when not in use.

This rack will hold the hook up off the floor and in position for instant replacement on the crane hook when its use is required. Racks are available designed for either single or multiple hook storage.

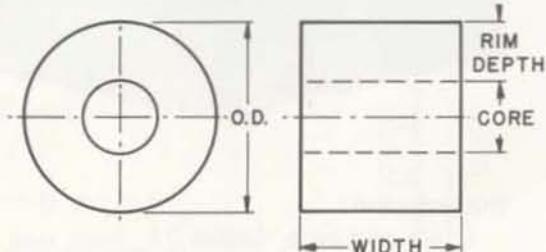

When requesting information on storage racks, give the principle hook dimensions B-C-D-E (from the drawing) and also the hook weight.

WEIGHT OF STEEL COILS

The weights in the table are for *steel* coils only. To obtain the approximate weight of an *aluminum* coil, multiply by 0.35, the weight of a steel coil of similar dimensions.

All weights are approximate and will vary according to tightness of the wrap, size of core, etc.

It is assumed that all devices in this bulletin will be operated only by persons competently trained in their use and maintenance. All handling equipment shown is to be used only under normal operating conditions and by safety minded personnel. Any use of the equipment for other than its intended purpose is done at users own risk.

We reserve the right to change designs at any time when in our opinion the product may be improved thereby.

Dimensions in inches unless otherwise specified. Weights given are approximate and may vary.

Capacities given have been carefully calculated and proven in use; they are submitted without assuming any responsibility beyond the original price of the merchandise.
